

Tutorial 3

1. What are the differences between proactive and reactive routing in wireless networks? Which one is affected more by high mobility?
2. What is the purpose of the sequence number in the table maintained by DSDV?
3. What are the differences between an update initiated because of broken link and a regular update in DSDV?
4. Given the network in Figure 1, determine the routing tables of DSDV protocol of nodes 1 and 4. If node 3 is turned off, determine the new routing tables of nodes 1 and 4, after all nodes are aware of node 3's absence.
